

GREEN VALLEY MEDICAL CENTER

Hospital Performance Analysis

Overview of Patient Outcomes, Cost & Operational Performance

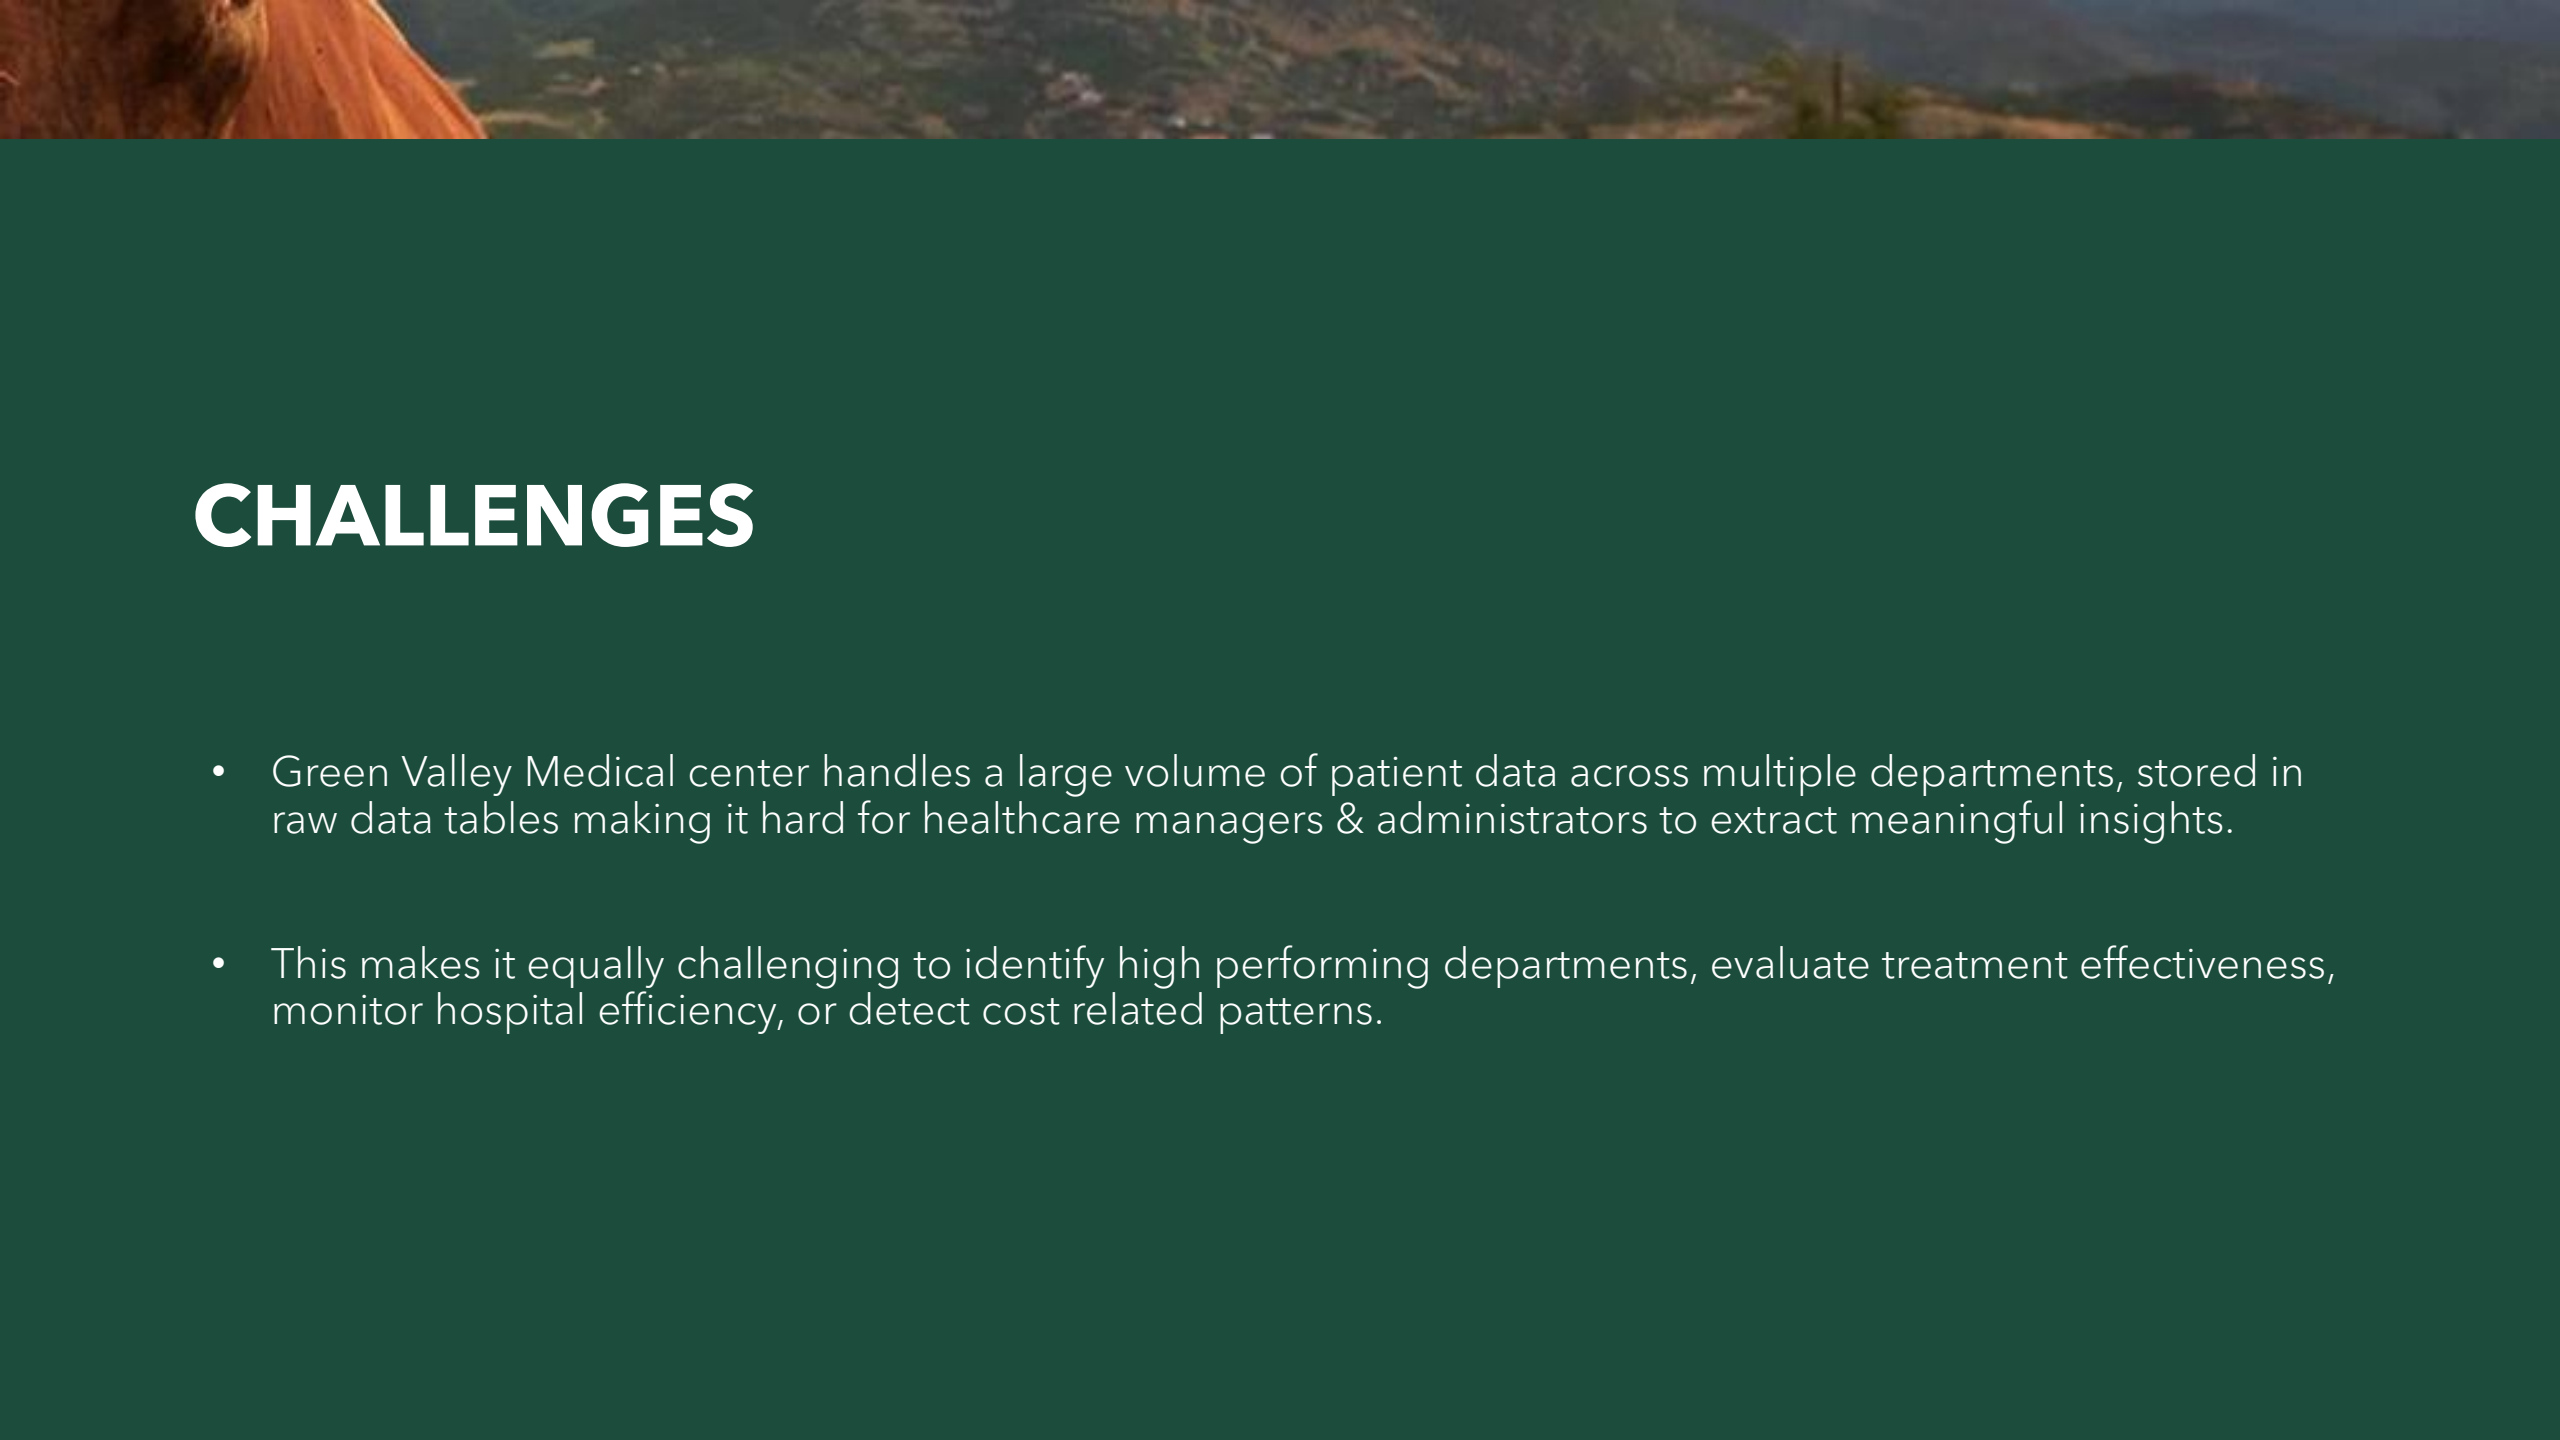

BUSINESS INTRODUCTION

Green Valley Medical Center is a Multi-departmental healthcare facility that provides a wide range of medical services, including cardiology, orthopedics, neurology, pediatrics and general medicine. The hospital is dedicated to delivering quality patient care through effective diagnosis, treatment, and recovery management.

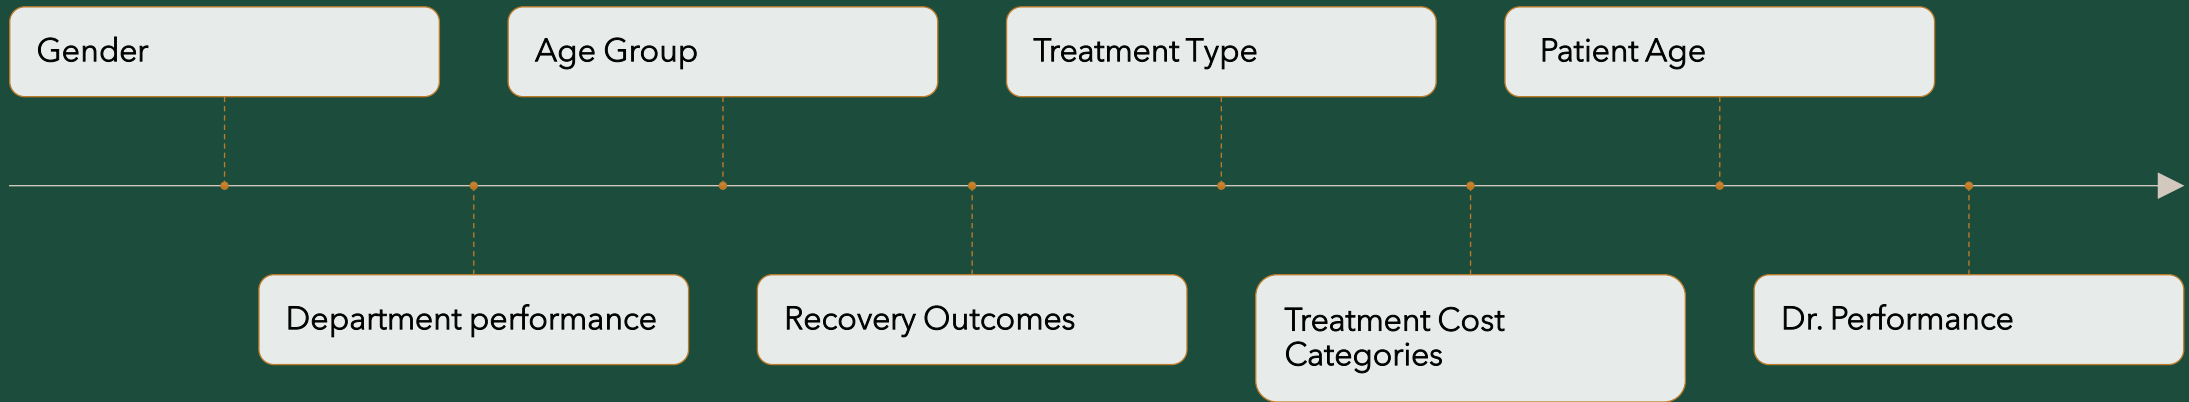

To support better decision-making and improve patient outcomes, the hospital collects and manages data related to patient demographics, treatment types, hospital stays, treatment cost, and recovery performance across its departments.

CHALLENGES

- Green Valley Medical center handles a large volume of patient data across multiple departments, stored in raw data tables making it hard for healthcare managers & administrators to extract meaningful insights.
- This makes it equally challenging to identify high performing departments, evaluate treatment effectiveness, monitor hospital efficiency, or detect cost related patterns.

Teenager	73.93
Infant	74.24
Youth	74.58
Middle Age	74.89
Adult	75.54
Child	76.02
Elderly	76.03

INSIGHTS

Dermatology has the highest recovery score indicating effective treatment outcomes

Children show slightly lower recovery stats; focus on this demographic,as age is consistent otherwise

Dr. Smith & Rodriguez underperform in recovery score suggesting opportunity for process improvement.

Cost & Category: Low & Moderate patients dominate

RECOVERY BY GENDER

Female	34%
Male	35%
Other	31%

TREATMENT COST BY CATEGORY

Low Cost	180
Moderate Cost	140
Very High Cost	30
Critical Cost	20
High Cost	10

Dr. Johnson	78.51
Dr. Miller	77.23
Dr. Jones	76.91
Dr. Garcia	76.80
Dr. Williams	76.38
Dr. Brown	75.29
Dr. Davis	74.89
Dr. Martinez	73.50
Dr. Rodriguez	72.78
Dr. Smith	69.78

RECOMMENDATION

Prioritize resources and training for department showing lower recovery stats(Cardiology & Oncology).

Standardise Surgical and Dermatology procedures treatment protocols for optimal patient recovery scores across all departments

Schedule performance reviews for Dr. Rodriguez and Dr. smith, focusing on lower-than-avg. recovery scores.

Investigate child recovery with focused patient care pathways optimize low cost procedures for patient throughputs'

Green Valley Medical Center Analytics & Performance Review

We have identified important key trends that demand our attention.

- Data reveals a stable trend in consumer demand for services and recovery outcomes regarding hospital performance
- Dermatology and General Medicine departments recorded the highest average recovery scores, indicating comparatively better treatment outcomes.
- Cardiology had the lowest average recovery score among all departments, suggesting the need for process review or patient care improvement.
- Most patients fell into the Elderly and Middle Age categories, indicating a higher demand for adult and elderly healthcare services.
- Low-Cost treatments accounted for the highest proportion of cases, showing that most treatments were relatively affordable or low-complexity.
- Moderately Effective treatments were the most common outcome category, while Highly Effective treatments represented a smaller proportion.
- The average hospital stay was approximately 5 days, suggesting that most cases were short-to-medium duration admissions.
- Male patients slightly exceeded female patients, although the gender distribution remained generally balanced.
- A small number of cases were classified under "Other" gender, which may not be statistically significant for broad conclusions.

RECOMMENDATION

- Investigate the Cardiology department to identify causes of lower recovery performance and introduce targeted quality improvement measures.
- Increase focus on preventive care and elderly patient support since elderly patients represent the largest demographic group.
- Develop strategies to improve treatment effectiveness from “Moderately Effective” to “Highly Effective” outcomes.
- Collect and put together time-based data to ensure monthly or quarterly performance improvements can be monitored.
- Schedule performance reviews for Dr, Rodriguez and Dr. smith, focusing on lower-than-avg. recovery scores.
- Include patient satisfaction or readmission feedback to strengthen performance evaluation and healthcare quality assessment.
- Investigate child recovery with focused patient care pathways optimize low-cost procedures for patient throughputs'
